Your requirements - our solutions

Our solutions portfolio is mainly focused to government customers to whom we offer a wide range of solutions in areas such as e-government, culture, education, internal affairs, as well as document management. Among our customers are leading ministries and other government and local government institutions in Latvia who have chosen our solutions to improve their work efficiency and to improve the way how they interact with society.

One thing that characterizes all of our projects and solutions is the focus towards the customer – no matter if the end-users are citizens, businesses, other public sector institutions or officials. Use of our solutions brings real benefits – in terms of time and money savings, easier and faster access to information and services – everything that matters in the information age!

The most significant solutions that we have developed for our customers include:

Customer	Solutions implemented
Ministry of Interior	Comprehensive Migration Information System (Population Register) National Visa Information System of Latvia Electors Register Integration of these systems with other state significance information systems and registers, EU Central Visa information system & Schengen information system
Ministry of Culture	Unified State Archives Information System National Museum Collection Catalogue information system Digital Culture Map Digital Object Management System (portal development)
Secretariat of Special Assignments Minister for Electronic Government Affairs	Development of integrated state and municipalities e-services solution and integration in the Latvia's State Portal www.latvija.lv  • winner of Latvia's National contest for World Summit Award 2009 in the e-Government & Institutions category State e-procurement system (electronic marketplace where state and municipality institutions buy goods from commercial suppliers)
State Revenue Service	Document Management System for central administration and over 40 regional institutions across Latvia
Cabinet of Ministers and State Chancellery	Unified and integrated electronic work environment among ministries and State Chancellery
Ministry of Education and Science	State Examinations Information System
Leading municipalities in Latvia	Various IT solutions, document management systems, etc.

Each of the solutions described further is custom developed, based on customer requirements and laws and regulations in the respective area, however, all of the solutions can be adapted to a large extent for the use of other customers and institutions in other countries. Apart from that we provide custom software development based on your requirements and outsourcing services.

If you are:

- a government or local government institution considering the development or implementation of any of these solutions or
- an IT company looking for a partner in providing a solution for your customer

RIX Technologies is willing to be Your Partner in eGovernment!

State significance information systems and registers

Comprehensive Migration Information System ensures:

- registration of residents of Latvia and foreigners,
- person's data processing, aggregation in the data base and statistical analysis;
- provides interfaces for the reception and inspection of person's data
- ensures information exchange with other institutions. The main modules of the system are Population Register; Entry ban register; Residence permits register; Work permits register; Invitations/ calls' register and Asylum seekers and refugees register.

National Visa Information System of Latvia provides:

- a convenient admission of visa applications and processing of literal and numeral information,
- biometrics data processing;
- supports decision making and consultation process for visa issuing in Office of Citizenship and Migration Affairs, Ministry of Foreign Affairs, diplomatic and consular representations abroad and border crossing points.
- ensures data exchange with EU Central Visa information system, and other information systems (Population Register, Schengen IS, etc.).

Electors Register

- a unified electors' registration system, where information on citizens who have rights to participate in the elections is included. In Latvia Electors Register is used in the elections of European Parliament and local governments. The information from the register is used to prepare the electors' lists that are being used in the electoral districts.

Innovative eGovernment solutions

State electronic procurement system (www.eiepirkumi.gov.lv)

- provides automated purchase process of goods, where customer can choose the products from qualified sellers according to their criteria from the dynamic catalogue of goods. With implementation of e-procurement system public sector marketplace was opened to greater competition, government's internal costs were reduced and greater transparency introduced into the public sector procurement process.

Pilot project of Electronic services development

- establishes a base for systematic electronization of government and municipalities' services and implementation of eGovernment solutions in public sector. 25 different e-services provided by state and municipality institutions are developed and are publicly available through E-services section in Latvia's State Portal www.latvija.lv (also developed by RIX Technologies).

Integrated State Information System

- a tool providing a possibility to:
 - create links among public registers, electronic services providers and recipients,
 - execute electronic services. System is intended for the developers of e-services and those willing to do information system integration, using modern technologies and standards.

Document management systems and integration solutions

Document circulation, registration and control system DAUKS

- used for electronic document processing and as a unified integration environment for the circulation of documents and tasks among State Chancellery and ministries.

Document exchange system of Ministry of Foreign affairs and embassies of the Republic of Latvia

- ensures unified document circulation in the Foreign Service.

State Revenue Service's (SRS) Document Management System

- will be implemented in the central administration of SRS and over 40 regional institutions across Latvia and is currently under development. Solution is based on Microsoft SharePoint technologies.

As a result of the implementation of document management systems the decision harmonization process has been accelerated, tasks execution discipline improved, documents circulation procedure optimized, the circulation of electronic documents among the related institutions ensured, and unified electronic environment for documents circulation created.

Solutions for cultural heritage organizations

National Museum Collection Catalogue (www.nmkk.lv)

- aggregates data on the heritage of all currently 110 accredited state, municipalities and private museums in a unified system and with the help of IT makes it available for every member of the society.

The catalogue allows monitoring the museum collection and planning the acquisition policy. It allows investigating the museum objects in more detail and getting acquainted with similar objects in other museums; facilitates the cooperation of archives, museums and libraries in the creation of cultural products and services, as well as facilitates studies of the local history.

Unified State Archives Information System

- ensures the availability of state archive information resources to the society

- provides integrated services depending on customer needs and live events,

- provides the accumulation and storing of state and municipality institutions' electronic documents and data that would guarantee the protection of state's and its residents legal and fundamental rights, continuity of state and municipality institutions and science development.

Digital Objects Management System (*Digital library project*)

- provides a unified platform for a complex solution for identification, processing, search and availability of digital objects and digital collection for a centralized long-term storage.

Digital culture map IS (www.kulturaskarte.lv)

- digital data base where detailed information on the state of culture infrastructure, overlay and availability of culture institutions, culture activities and development trends in the country is available.

JSC "RIX Technologies"

- one of the leading software development companies in Latvia
- developer and integrator of state significance information systems
